Basic LaTeX Formatting

Max Cohen

March 8, 2023

1 Introduction

Basic formatting tags in LaTeX

1.1 Text Formatting

All of the things you may want to do, and sometimes should... of course with an emphasis on SOMETIMES.
this is how you make text bold
Notice how the text in here is indenteded. By default LaTeXdoes this
this is how you put text in italics
and this is how you make text underlined
Notice how this text is bold but this text isnt? Only text in the textbf tag will be bold

1.2 Paragraph formatting

As mentioned all paragraphs are automatically indented. If you dont want them to be you user noindent
This is why this line isnt indented

2 Oddities

Strange things i notices

2.1 misquoting

This is how i would normally do 'single' and "double quotes" Notice how both are pointing the same way? You would use the *other* quote key that See my new 'single' quote? And my "double" quote?

3 Conclusion

These are some of the basic elements in a LaTeX file, and we will see many more.
